# CAHABA VETCH

Cahaba Vetch provides a means of supplying an excellent forage source in the eastern and southern parts of the US during summer months. It does not tolerate cold temperatures and will begin to die off around 20°F. As a summer legume, it can be used to follow wheat, bypass planting, to fix nitrogen, and provide a superior grazing or hay source. An added benefit to your cover cropping program – Cahaba Vetch can assist in controlling some nematode species.

BENEFIT RATINGS	EROSION CONTROL	
	FORAGE QUALITY	
	NITROGEN SOURCE	
	NUTRIENT SCAVENGING	
	QUICK GROWTH	
	SOIL BUILDING	
	WEED SUPPRESSION	
	WINTER HARDINESS	
	PLANTING INFO	SEEDING RATE LBS/A
SEEDING DEPTH		0.5 - 0.625"
MIN. GERM. TEMP		60 F
INTERSEED		YES
SEEDS/LB		6,600
