

Cover Crops
Our Roots Run Deep

DAIKON RADISH
ENRICHER

Radish is a cool season annual, ideally suited for mixes with most other cover crop species. Enricher Radish will scavenge extra nutrients (especially sulfur) and increase soil biology but will need 60 days of good weather to achieve its full potential. Planted alone, it will increase spring erosion, therefore, seed with peas, oats, annual ryegrass or cereal rye. It will also winterkill with two days of 20°F temps and will decompose by spring. Unfortunately, as the radish decomposes, it will release nitrates back into the atmosphere rather than sequestering them for the following crop. Enricher Radish will help control several nematode species, and its large taproot is the ultimate bio driller to break compactions and increase water infiltration.

BENEFIT RATINGS	EROSION CONTROL	
	FORAGE QUALITY	
	NITROGEN SOURCE	
	NUTRIENT SCAVENGING	
	QUICK GROWTH	
	SOIL BUILDING	
	WEED SUPPRESSION	
	WINTER HARDINESS	
PLANTING INFO	SEEDING RATE LBS/A	DRILLED: 6 BROADCAST: 8 - 10 AERIAL: 8 - 10
	SEEDING DEPTH	0.25 - 0.5"
	MIN. GERM. TEMP	50 F
	INTERSEED	YES
	SEEDS/LB	34,000
